

Duplex filters are used in hydraulic systems for separating solid materials from the hydraulic fluids and lubricating oils. They are intended for installation into piping. The filter element can be changed without any operational interruption.

Your product advantages:

50LD(N), 150LD(N), 210LD(N), 250LD(N) und 400LD(N)

- Very low leakage in the changeover
- Optional measuring point at inlet and outlet
- Pressure compensation function as standard
- Various mounting options, wall and head mounting
- Standard version with mechanical-optical maintenance indicator with memory function
- Optionally available with various electronic switching elements modular design
- Optional bypass valve integrated in filter housing
- Leakage-free check valve on the clean side
